SUN CLOCK

USER INSTRUCTIONS

When Know-How becomes Art

CONGRATULATIONS

You have just acquired an advanced timepiece from L'Epée 1839 x Baccarat.

Sun Clock was designed in partnership with Baccarat and developed with passion and care by L'Epée 1839's master watchmakers in Delémont, Switzerland.

This clock includes Baccarat Crystal.

Important information	4
Care and Maintenance	5
Winding the movement	6
Setting the time	7

IMPORTANT INFORMATION

Please be very careful to never touch the movement of Sun Clock (here in red). The movement should never be in contact with any liquids - even in vaporized form. If it occurs, the clock should be serviced immediately.

A simple contact on certain pieces can generate delays in timekeeping, which can only be solved by servicing.

Fingerprints will also damage the coating.

CARE AND MAINTENANCE

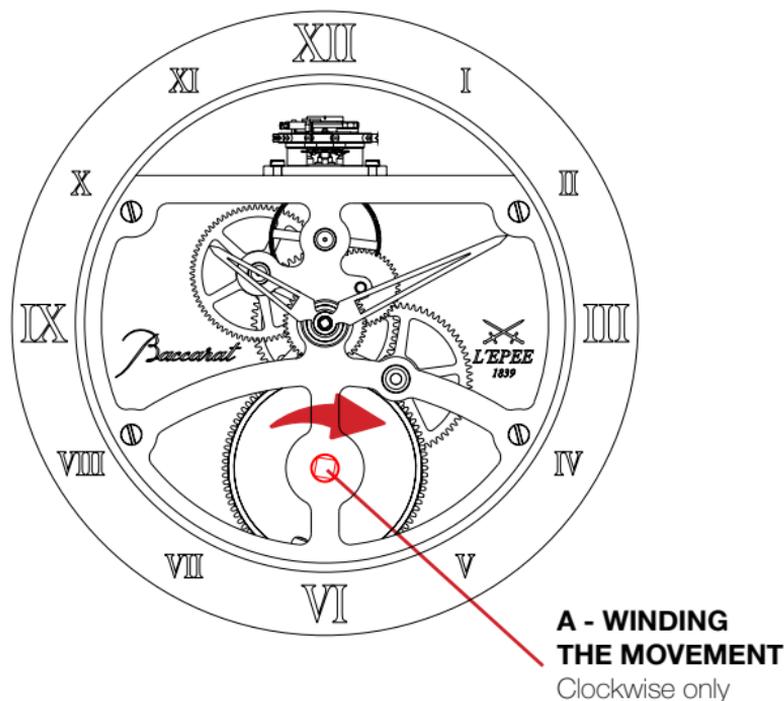

Use only a soft and dry cloth to clean the clock. Dust and particles contained in the cloth could scratch parts. Do not use any kind of cleaning products to wipe the clock or the skull. It is recommended to keep the clock distant from any source of heat or vibrations. To preserve the longevity and functionality of Sun Clock, do not permanently expose the clock to direct sunlight or in a humid or dusty place.

Our clocks are developed to ensure optimal accuracy and reliability. It is well accepted for a fine mechanical clock to have a few seconds' variation per day and our clocks are set so as not to delay. However if you should notice a bigger variation, please contact an authorized dealer who will advise you, or a L'Épée 1839 technical support center which will proceed with the necessary adjustment.

As for all Horological pieces of art, it is recommended to periodically service your clock. A mechanical masterpiece requires fine oils for the lubrication of the movement. These oils deteriorate over the years. We therefore advise having the movement serviced every 3 to 5 years. Be aware that the optimal period between servicing times can vary depending on the surrounding environmental conditions.

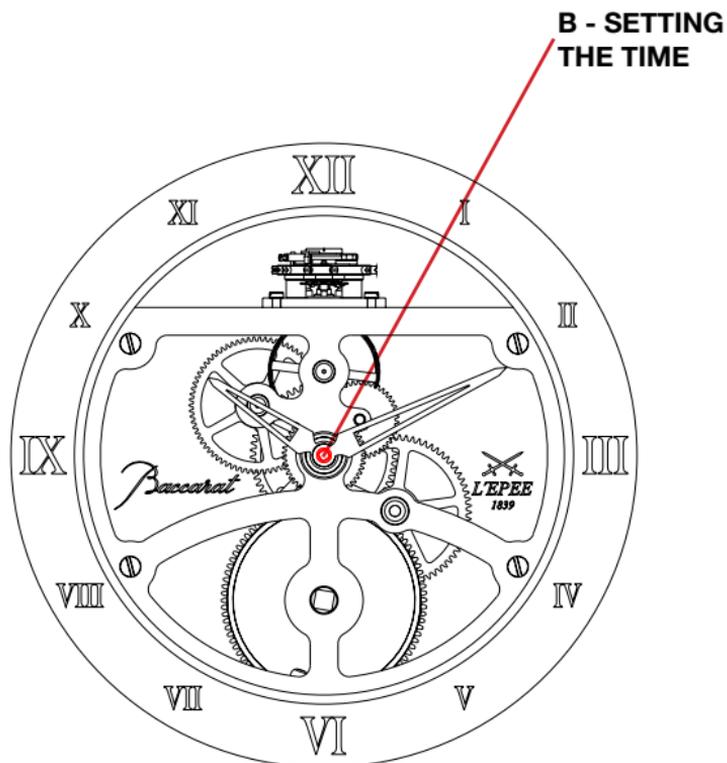

WINDING THE MOVEMENT

To wind the movement of Sun Clock, use the larger diameter end on the key. Place in point A on front of the clock, see below. The movement should be fully wound every 8 days. Be sure to wind up the spring completely. At the end of the winding procedure, you will feel the necessary force increase significantly; do not wind further as this is the sign that the movement is fully wound. Make sure the minute and hour hands are away from the winding button hole to avoid any damages.

SETTING THE TIME

Using the smaller end of the key, place the hole in point B (see below), turn anti-clockwise or clockwise in order to set the time. You will see hands moving.
